

State/UT:	Assam
Name of Good Practice	VPN Technology in CCTNS
1. Introduction- VPN Technology for CCTNS (Enhancing Security and Connectivity)	
Assam Police has implemented the Virtual Private Network (VPN) as an alternate connectivity to access CCTNS (Crime and Criminal Tracking Network & Systems) services in a secured and encrypted manner over a less secured network. The VPN technology ensures the data movement between the Police Stations and central databases when the dedicated leased line link for CCTNS gets down. It is an exclusive practice for Police Stations and other CCTNS users to have online access to the CCTNS services.	
2. Key Highlights	
The VPN technology in CCTNS enhances data security, facilitates secured access from remote location, improves communication across Police Stations, and ensures compliance with security standards. It is also a scalable and cost-effective solution for the growing needs of crime and criminal tracking networks. Some Key Highlights are as follows –	
i. <u>Remote Access for Field Personnel</u>- Authorized officers can securely access the CCTNS database remotely, whether in the field or from remote locations, improving efficiency, response time, and effectiveness. ii. <u>Cost Efficiency in Secured Communication</u>- VPNs offer a cost-effective method to fulfill the requirement of redundant connectivity for seamless CCTNS access. Moreover, VPN can be scaled to meet the expanding needs of CCTNS without additional costs. It is also ideal for long-term usage. iii. <u>Enhanced Data Security</u>- VPNs encrypt sensitive data relating to criminal records, investigations, and case files and also protect them from unauthorized access.	
3. Photo Graphs, Screenshots and Pictorial presentation	
Here's the pictorial diagram illustrating VPN technology within the CCTNS network, showcasing secure connections between Police Stations and the central CCTNS database through a VPN.	
 The diagram illustrates the CCTNS Assam Virtual Private Network architecture. It shows 'Police Stations and HO' connected to the 'internet' cloud, which then connects to the 'State Datacentre' via a 'VPN Tunnel'. A 'Remote User' is also shown connected to the 'internet' cloud. To the right, a screenshot of the 'User Portal' is displayed, featuring a login form with fields for 'Username', 'Password', and 'CAPTCHA', along with a 'Login' button. The portal has a dark blue background with a white user icon and the text 'User Portal'.	

4. Impact of the project on citizens/policeman

The integration of VPN technology within the CCTNS project has provided additional security and accessibility benefits for police personnel.

- i. **Field Access to CCTNS:** Officers can access CCTNS data remotely from the field, including viewing the case files, records, and other vital information through a secure VPN connection.
- ii. **Enhanced Flexibility:** VPN allows officers to connect securely to CCTNS even from outside Police Stations, enabling quicker data retrieval and better responsiveness during investigations.
- iii. **Better Service Continuity:** VPN ensures stable and uninterrupted access to CCTNS, leading to faster response times for citizens and improved access for police personnel

5. Organizational Sustainability

VPN technology in CCTNS Assam is a secure and cost-effective functionality. It allows the CCTNS users to access the CCTNS services without hindrance. Moreover, the VPN allows the addition of new Police Stations or organizational offices easily, supporting the growing demand of the CCTNS.

6. Methodology used in implementation-

Assam has implemented a VPN as a redundant connectivity to access CCTNS services remotely. The state has procured the *SOPHOS XGS 3100 Xstream* protection firewall and configured as a VPN device to cater to VPN requirements for more than 1000 user.

7. Adaptability and Scalability

Assam Police has a plethora of Police Stations situated in difficult terrain and remote places. Due to various natural calamities, frequent link downs have been a common scenario in these places. VPN plays a vital role in this location to access CCTNS services. Moreover, It has been witnessed that various road construction works towards nation-building lead to fiber cuts and frequent dedicated CCTNS link downs in various places of the state and VPN helps the Police Station timely deliver the CCTNS services to the citizens during those link down hours.

Category	VPN Count of Office Type
PS and ORG. PS	342
SP Office	37
Total	379

Available for both Citizens/Police/Both:

Police only.
